

Industrial Statistics

Nikkei's Industrial Statistics data contains information on energy consumption, current surveys of Production and data on Industrial output, all of which are provided in a consistent format to enable clients to accurately compare data over the years.

Nikkei Energy Data

Data on various statistics associated with Japanese energy economics, including energy consumption by location & industry, energy production and statistics. Supply-demand data (production, sales, inventory, import/export, etc.) and price data on energy goods such as crude oil, coal, gas, electricity & nuclear energy, petrochemicals, etc. These are then further broken down to provide as detailed data as possible: the oil category includes gasoline, naphtha, kerosene oil, jet fuel, diesel fuel (light oil), etc. Gas category includes liquefied petroleum gas (LPG), liquefied natural gas (LNG), natural gas, etc. Electric power & nuclear power category includes electric power supply, service electric energy, bulk electric power usage by industry, etc. Major information resources are "Monthly Report on the Current Survey of Energy Consumption", "Monthly Report on Electric Power Statistics", "Monthly Report on Mineral Resources and Petroleum Products", "Monthly Report on Gas Industry", "Summary Report on Trade of Japan."

Industrial Statistics

Extensive data on industrial statistics essential for analyzing industrial activities and the foundations of the economy. Statistics independently surveyed and published by various industry sources including the Japan Society of Industrial Machinery Manufactures, Japan Automobile Dealers Association, Japan Department Stores Association, and central government agencies. The coverage sectors are food, chemical, medical products, ceramic, steel, non-ferrous, machinery, electronic appliance, automobile, transportation machinery, transportation, construction & real estate, service, etc. In each category, statistical data for manufacturing industries, data on supply/demand data such as production value, shipping value, inventory are available; and for non-manufacturing industries, revenue, order volume, activity volume, and level of activity.

Current Survey of Production

Data provided in Industrial Statistics Monthly, Yearbook of Industrial Statistics, and dynamic statistics of production compiled by METI. The "Industrial Statistics" provides aggregated results of surveys on dynamic statistics of production conducted by the METI. The results are released in flash/monthly/annual reports of "Iron and Steel Statistics", "Machinery Statistics", "Chemical Industry Statistics", etc. Monthly data is recorded in NEEDS databases. The databases provide information on such items as production, acceptance, consumption, sales, inventory, etc.
